

fact sheet

porescreen spf 40

description

A multitasking sunscreen that delivers SPF 40 protection, while supporting healthy-looking pores, minimizing their appearance with a blurring, primer-like effect, and enhancing skin tone with a hint of tint for radiant skin.

key benefits

- **High protection** against UVA and UVB rays
- **Blurs** skin while supporting healthy-looking pores
- **Enhances** skin with primer-like effect and hint of tint for sheer finish

key ingredients

- **Zinc Oxide:** Physical sunscreen that helps protect against UVA and UVB rays.
- **Niacinamide:** Helps reduce sebum oil and improves the appearance of pores. Maintains hydrated skin by strengthening the skin barrier and reducing Transepidermal Water Loss (TEWL).
- **Green Microalgae, Squalane, antioxidant Vitamin E blend:** Moisturizes, softens, and smooths skin.

how to use it

Shake before each use. Apply an even amount of product to face after moisturizing each morning. Can be worn alone or underneath make-up.

1.59 x 1.19 x 4.76

frequently asked questions

Does Porescreen SPF 40 really blend into all skin tones? Why does it look white when it comes out of the tube?

A: Yes, this product is suitable for different skin tones. It comes out white because of the Zinc Oxide in the formula, but the white appearance dissipates as you blend it onto the skin, leaving a hint of tint or sheer finish.

How should this product be applied?

A: To ensure this blendable, mineral sunscreen leaves a sheer finish suitable for different skin tones it's important to shake well. Then, apply evenly and liberally to face, preferably 15 minutes prior to sun exposure. Can be worn alone or underneath make-up.

Which is more important: SPF number or frequency of application?

A: Application, by far! While SPF numbers matter we recommend wearing at least an SPF 30), whether your client will wear a sunscreen daily – and correctly – matters more.

Why is this product ideal for sun protection post-treatment?

A: Zinc Oxide is unlikely to irritate sensitive skin, which makes it a reliable choice for skin that has undergone a treatment.

Should this product be used even if my clients are not regularly outdoors?

A: Yes! UV rays are always present, even on rainy or cloudy days; and they can penetrate glass. Besides that, blue light is everywhere, which is why it is imperative for clients to wear sunscreen daily and indoors.

Will this product look invisible and wear well under make-up?

A: Yes! With all sunscreens, please advise your client to wait until their sunscreen feels dry before they apply make-up over it. This formula blurs and smooths skin with a primer-like effect while encapsulated light-reflective tint enhances skin tone with a sheer finish – perfect for wearing under make-up.

Which moisturizer can I layer with Porescreen SPF 40?

A: We recommend applying a moisturizer like Active Moist or Skin Smoothing Cream before layering on Porescreen SPF 40.

Why is this product recommended as the last step in the treatment room?

A: We recommend using porescreen SPF 40 as the last step in the treatment room because it enhances skin tone with a hint of tint for radiant skin. The blurring, primer-like effect offers coverage for redness, blemishes, etc. Additionally, this product leaves a sheer finish suitable for different skin tones.

Can Porescreen SPF 40 be mixed with other products?

A: Ideally, Porescreen SPF 40 should be the last layer in your skin care routine.
