

restore post-care treatment

OPTIMIZE YOUR AESTHETIC PROCEDURE +
IMPROVE PATIENT COMFORT

dermalogica PRO

when it comes to micro-injury treatments,
discomfort and downtime are the #1 concerns

Patient discomfort: Aesthetic procedures present a challenge with patient discomfort, as the inherent nature of treatments can induce varying levels of pain, affecting the overall experience.

Downtime concerns: Clients may experience limitations in daily activities, leading to frustration and dissatisfaction as after aesthetic treatments, patients may experience disruptions to their routine.

Psychological impact: The discomfort and downtime post-treatment can have psychological implications, contributing to increased stress or anxiety for patients. Addressing these psychological aspects is crucial to ensure a positive overall client experience.

introduction: restore post-care treatment

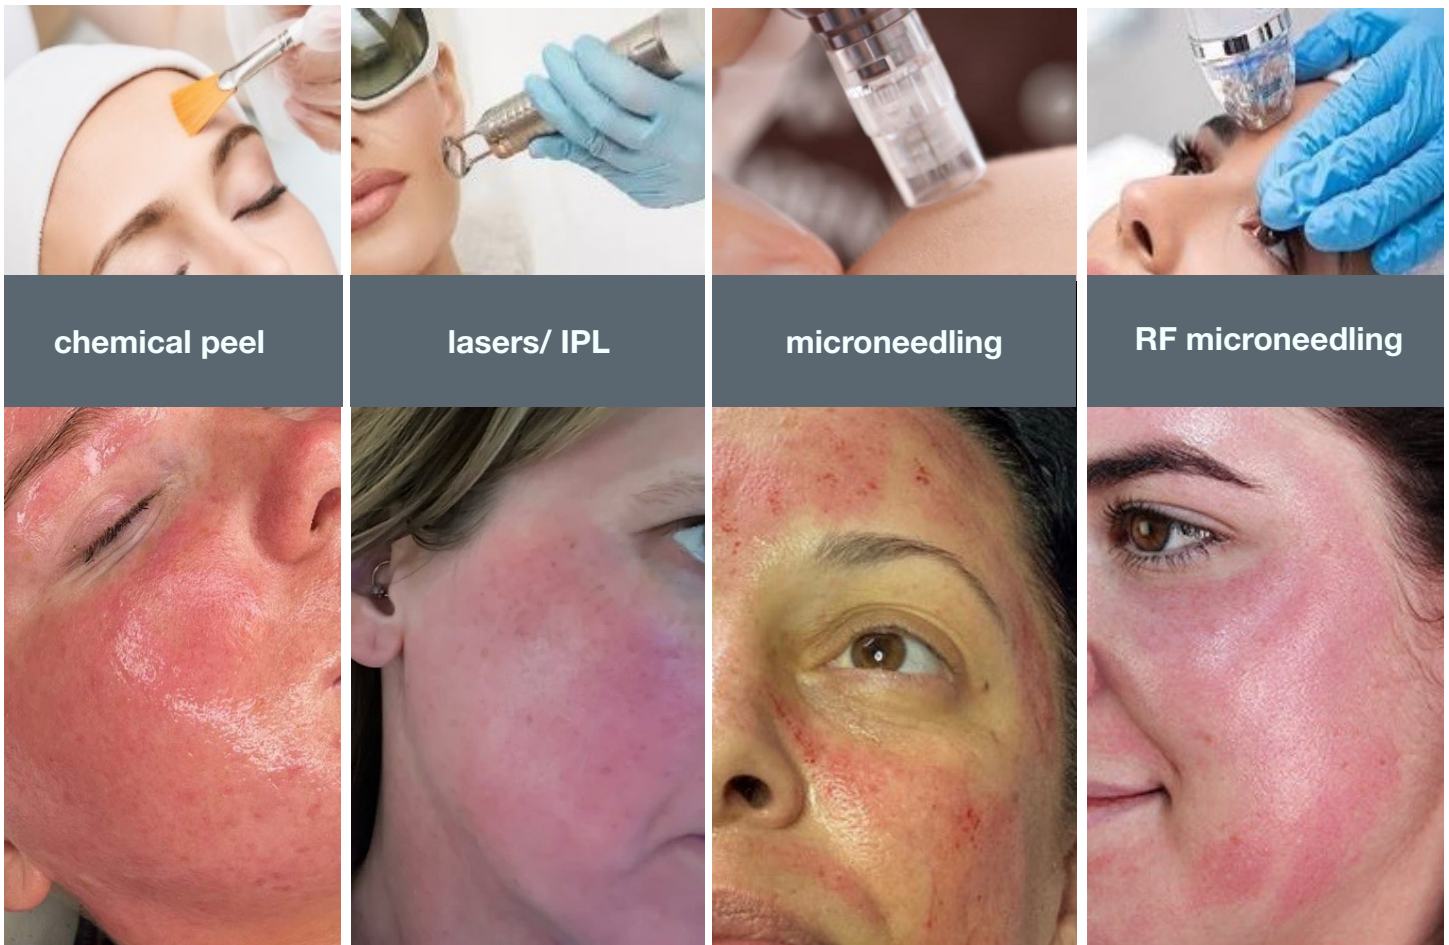

Introducing New Restore Post-Care Treatment

Optimize your aesthetic procedure while minimizing down-time and discomfort with Restore Post-Care Treatment. This treatment not only reduces post-procedure discomfort, but also supports the recovery process, ensuring a revitalizing experience for every client's skin.

Restore Post-Care Treatment is ideal after:

- Microneedling
- RF Microneedling
- Non ablative laser
- Fractional laser
- IPL

why did we create this service?

Have you ever undergone advanced treatments such as laser, microneedling, or RF microneedling?

While every patient is warmly welcomed, the process can often feel clinical and may induce stress. Numbing cream is typically applied before the procedure, and medical aesthetics practitioners perform the selected treatment. The treatment may cause discomfort, pain, and possibly other side effects.

We aimed to develop a service to enhance the patient experience and promote overall skin health immediately after the procedure.

Individuals investing in these treatments pay a significant amount, so we wanted to elevate the experience to higher standards.

Additionally, we understand that a better experience encourages repeat bookings and helps differentiate clinics from others in the area. Therefore, we created a service that our accounts can use to improve their overall business performance.

treatment highlights

Cooling Biocellulose Sheet

Applied immediately after the procedure for 3-4 minutes, this sheet masque has a unique cooling ingredient to neutralize extreme heat sensation and discomfort.

Light Energy Masque

With its unique complex of mushroom extracts, this gel masque reduces discomfort and helps re-energize skin. During the 5-min application, clients feel comforted, and their skin appears calmer.

Pro Restore

With our unique Omega-3 Pro Resolution Technology, this concentrate kick starts the recovery process. Applied as the final step in this treatment, it will support less downtime as well as amplified results.

restore post-care service

1. Lightly wipe the skin with cool, damp esthetic wipes. This ensures any residue or product has been removed.

2. Cooling Biocellulose Masque:

- Apply protection across the eyes.
- Tear open the pouch, remove the masque, and unfold.
- Remove the masque from the first protective film and apply to the face, adjusting to the facial contours.
- Remove the second layer of the protective film and smooth the masque with fingertips, ensuring a comfortable fit.
- Leave the masque on for about 3 minutes, however, if areas of the masque begin to dry sooner, remove before the 3-minute mark to ensure comfort.
- Remove the masque, gently lift from the corners and discard.

3. Light Energy Masque:

- Apply a thick layer of Light Energy Masque with a spatula to the entire face and leave on for 5 minutes. (This professional masque is also ideal if using Red LED.)
- Gently remove with cool, damp esthetic wipes.

4. Pro Restore:

- Apply Pro Restore with fingertips and allow to absorb.

5. Send the patient home with Pro Restore and recommended home care products to hydrate and nourish the skin along with any additional instructions for their at-home skin recovery and product regimen.
